#### **DETAILED ACTION**

#### Status of Claims

Claims 1 and 27 have been amended. Claims 1-14 and 27-30 remain pending and are again presented for examination.

# Response to Arguments

- 1. Applicant's amendments filed 26 June 2006, with respect to 35 U.S.C. 112, second paragraph, have been fully considered and are therefore withdrawn.
- 2. Applicant's arguments, see pages 14-15 of the arguments, filed 26 June 2006, with respect to 35 U.S.C. 101 have been fully considered and are persuasive. The rejection of claims 1-14 and 27-30 has been withdrawn.
- 3. Examiner acknowledges receipt of the information sent by the Applicant in response to the Requirement for Information Under 37 C.F.R. § 1.105.
- 4. Applicant's arguments, with respect to the Nonstatutory Double Patenting rejection, have been fully considered but the rejection is upheld.

#### **Drawings**

The drawings were received on 26 June 2006. These drawings are acceptable.

## Allowable Subject Matter

5. Claims 27-30 would be allowable over the prior art of record if the claims overcome the 35 U.S.C. 112 and 35 U.S.C. 101 rejections, and are therefore objected to.

Application/Control Number: 10/053,304 Page 3

Art Unit: 3639

## Claim Rejections - 35 USC § 112

6. Claims 5, 8 and 27 are rejected under 35 U.S.C. 112, second paragraph, as being

indefinite for failing to particularly point out and distinctly claim the subject matter which

applicant regards as the invention.

As per Claim 5, the recitation "other cost" is vague and indefinite. It is unclear to the

Office what other costs consists of. Appropriate correction is required in the indicated claim and

any subsequent claims.

As per Claim 8, the recitation "other staff" is vague and indefinite. It is unclear to the

Office what other staff consists of. Appropriate correction is required in the indicated claim and

any subsequent claims.

As per Claim 27, Claim 27 recites the limitation "the product of the number of..." in

lines 4, 6 and 9. There is insufficient antecedent basis for this limitation in the claim.

Appropriate correction is required in the indicated claim and any subsequent claims.

## Claim Rejections - 35 USC § 101

7. 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

In determining whether the claimed subject matter is statutory under 35 U.S.C. 101, a practical application test should be conducted to determine whether a "useful, concrete and tangible result" is accomplished. See *AT&T Corp. v. Excel Communications, Inc.*, 172 F.3d 1352, 1359-60, 50 USPQ2d 1447, 1452-53 (Fed. Cir. 1999); *State Street Bank & Trust Co. v. Signature Financial Group, Inc.*, 149 F.3d 1368, 1373, 47 USPQ2d 1596, 1600 (Fed. Cir. 1998).

An invention, which is eligible or patenting under 35 U.S.C. 101, is in the "useful arts" when it is a machine, manufacture, process or composition of matter, which produces a concrete, tangible, and useful result. The fundamental test for patent eligibility is thus to determine whether the claimed invention produces a "use, concrete and tangible result". The test for practical application as applied by the examiner involves the determination of the following factors"

- (a) "Useful" The Supreme Court in *Diamond v. Diehr* requires that the examiner look at the claimed invention as a whole and compare any asserted utility with the claimed invention to determine whether the asserted utility is accomplished. Applying utility case law the examiner will note that:
  - i. the utility need not be expressly recited in the claims, rather it may be inferred.
  - ii. if the utility is not asserted in the written description, then it must be well established.
- (b) "Tangible" Applying *In re Warmerdam*, 33 F.3d 1354, 31 USPQ2d 1754 (Fed. Cir. 1994), the examiner will determine whether there is simply a mathematical construct claimed, such as a disembodied data structure and method of making it. If so, the claim involves no more than a manipulation of an abstract idea and therefore, is nonstatutory

under 35 U.S.C. 101. In *Warmerdam* the abstract idea of a data structure became capable of producing a useful result when it was fixed in a tangible medium, which enabled its

functionality to be realized.

(c) "Concrete" - Another consideration is whether the invention produces a "concrete"

result. Usually, this question arises when a result cannot be assured. An appropriate

rejection under 35 U.S.C. 101 should be accompanied by a lack of enablement rejection,

because the invention cannot operate as intended without undue experimentation.

As currently recited the claims appear to be nothing more than a series of determining

steps, determining a variety of values, costs and uplift factors. While these steps may be useful,

there does not appear to be any tangible result. Consequently, the claims are non-statutory for

failing to recite a tangible result.

#### Claim Rejections - 35 USC § 103

8. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all

obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the

manner in which the invention was made.

9. Claims 1-14 are rejected under 35 U.S.C. 103(a) as being unpatentable over Feria et al.,

U.S. Patent No. 7,020,621 B1.

Application/Control Number: 10/053,304

Art Unit: 3639

As per Claim 1, Feria et al. discloses a method comprising:

- determining a user value contribution of said application as an internal user cost and an external user cost (C. 1, lines 10-23, C. 6, line 10 – C. 7, line 30);

Page 6

- determining an unavailability value for said application (C. 14, line 54 C. 15, line
   4);
- determining a potential total loss value for said application (C. 17, lines 11-15); and
- determining said net value as said total value for said application less said total IT budget, said internal user cost, said potential total loss, and said inflexibility (C. 1, lines 21-23).

Feria et al. fails to explicitly disclose determining a breakout of said total IT budget by assigning a number of select cost categories therefrom and for each such cost category determining a total budget value; determining a breakout of staffing costs and resources by deriving a select number of staff function costs and combining said function designated costs to provide an IT budget corresponding with said total IT budget; and determining a total value for said application by deriving an uplift factor for said application, determining a base application value with respect to said internal user cost and then deriving the product of said base application value and said uplift factor and combining said product with said external user cost.

However, Feria et al. discloses a variety of cost categories (labor costs, indirect and direct costs, etc.), which are part of an overall budget for determining the value of the application to the business (C.10, line 55 – C.13, line 57). Feria et al. further discloses staff costs (support and help desk) and resources (bandwidth and training), which are part of an overall IT budget (C. 14, line 55 – C. 18, line 37). Furthermore, Feria et al. discloses standardizing (put under a format that

Application/Control Number: 10/053,304

Art Unit: 3639

allows one to compare the data elements with a format that allows one to compare the data elements with others and do benchmarking to depict typical values for each data elements and metric) (C. 2, lines, 38-41). Feria et al. further discloses internal and external costs associated with a number of cost categories, which are used to determine an overall IT budget (C. 6, line 10 – C. 10, line 16). The internal and external costs of Feria et al. are standardized and combined to form an overall IT budget (C. 10, lines 55-67). Therefore, it would have been obvious to one of ordinary skill in the art at the time of applicant's invention to modify the method of Feria et al. and include determining a number of cost categories and their associated costs in order to calculate an overall IT budget, because it allows a company to budget for an IT application by determining all their direct and indirect costs associated with implementing a new application.

As per Claim 2, Feria et al. discloses preparing an analysis of said at least one application including at least one of the group comprising; said net value, said breakout of said total IT budget, said breakout of staffing costs and resources, said unavailability value, said potential total loss value, and said inflexibility value (C. 17, lines 11-15).

As per <u>Claim 3-4</u>, Feria et al. fails to explicitly disclose determining a user value contribution of said application derives said internal (external) user cost as the number of internal (external) users of said application multiplied by the internal (external) user salary, in turn, multiplied by the percent of internal (external) active concurrent users. However, Feria et al. discloses determining the cost (salaries of end users) of users who do not perform their core role (C. 9, lines 35-39). Further, Feria et al. discloses the average corporate salary, support desk costs

per FTE (full-time equivalent) which can be used to determine the cost associated with their specific functions in order to determine an overall IT budget (Table 33). Therefore, it would have been obvious to one of ordinary skill in the art at the time of applicant's invention to modify the method of Feria et al. and include determining a user value by the number of users and their associated costs (salaries), because it provides a cost to the company of employing that user versus the benefit they receive from that user employing that application.

As per <u>Claim 5</u>, Feria et al. discloses determining a breakout of said information technology budget by assigning a number of select categories therefrom, assigns at least one said select category from the group consisting of; fully loaded staff cost, hardware cost, software cost, network cost, consulting cost, and other (C. 4, lines 43-51).

As per <u>Claim 6</u>, Feria et al. discloses determining a breakout of said information technology budget includes the steps of: determining internal budget splits for each said select category; and determining budget splits for each said select category (C. 7, lines 59-65, C. 9, lines 5-25, C. 13, lines 10-13).

As per Claim 7, Feria et al. fails to explicitly disclose determining a user value contribution of said application determines a said total budget value for each said cost by summing said internal budget splits for each said category with respective said budget splits corresponding therewith. However, Feria et al. discloses summing all cost category budgets including outsourced management fees such as strategic and tactical consulting (C. 7, lines 64-

65, C. 11, lines 49-57). Therefore, it would have been obvious to one of ordinary skill in the art at the time of applicant's invention to modify the method of Feria et al. and include determining a user value by summing all cost category costs including outsourced costs, because it allows the company to take into effect all the costs associated with providing the application.

As per Claim 8, Feria et al. fails to explicitly disclose determining a breakout of staffing costs and resources derives said select number of staff function costs from the function group comprising: senior manager staff, new development staff, maintenance development staff, operations staff, technical staff, and other staff. However, Feria et al. discloses several staff function costs (support staff, help desk, accounting, etc) (C. 10, line 53- C. 12, line 21, C. 16, lines 50-67). Therefore, it would have been obvious to one of ordinary skill in the art at the time of applicant's invention to modify the method of Feria et al. and include several staff function costs, because it provides the a breakdown of all the staff costs associated with determining an overall IT budget.

As per Claim 9-11 and 14, Feria et al. fails to explicitly disclose determining a breakout of staffing costs and resources includes the step of deriving the gross cost of internal (outsourced) staff for each said function of said select number of staff function costs. However, Feria et al. discloses the total cost of support desk and outsourced management fees such as strategic and tactical consulting (C. 7, lines 64-65, C. 10, line 53 – C. 12, line 21). Therefore, it would have been obvious to one of ordinary skill in the art at the time of applicant's invention to

Application/Control Number: 10/053,304

Art Unit: 3639

modify the method of Feria et al. and include determining an overall staff cost, because it provides an overall staff function cost associated with the IT budget.

As per Claim 12, Feria et al. fails to explicitly disclose determining a breakout of staffing costs and resources includes the steps of: determining the percents by cost for each said gross cost of internal staff for each said function by dividing each corresponding internal staff gross cost by said summarized internal staff gross cost; and determining the percents by cost for each said gross cost of staff for each said function by dividing each corresponding gross cost by said summarized staff gross cost. However, Feria et al. discloses determining support costs by dividing the total costs of support desk by the total number of hours a user works on average per year (C. 7, lines 56-65, C. 10-line 53 – C. 12, line 21). Therefore, it would have been obvious to one of ordinary skill in the art at the time of applicant's invention to modify the method of Feria et al. and include determining a percentage of staff costs by dividing staff costs by an overall staff cost, because it provides an indicator of the amount the staff cost is associated with an overall staff cost.

As per Claim 13, Feria et al. discloses determining the fully loaded cost of said internal and outsourced staff (C. 12, lines 36-57). Feria et al. fails to explicitly disclose determining a normalized value for each said gross cost of internal staff for each said function to provide normalized internal staff gross costs by multiplying such gross cost by the corresponding said percents by cost for internal staff; and determining a normalized value for each said gross cost of staff for each said function to provide normalized staff gross costs by multiplying said gross cost

by the corresponding said percents by cost for staff. However, Feria et al. discloses determining a support cost ratio, where the total support costs are divided by the total number of hours a user works on average per year, where the ratio can be used to provide an estimating guideline (C. 2, lines 37-42, C. 11, lines 34-45). Therefore, it would have been obvious to one of ordinary skill in the art at the time of applicant's invention to modify the method of Feria et al. and include standardizing the cost categories values, because it provides a benchmark in which to estimate the staff costs.

#### Conclusion

Examiner's Note: Examiner has cited particular columns and line numbers in the references as applied to the claims below for the convenience of the applicant. Although the specified citations are representative of the teachings in the art and are applied to the specific limitations within the individual claim, other passages and figures may apply as well. It is respectfully requested that the applicant, in preparing the responses, fully consider the references in entirety as potentially teaching all or part of the claimed invention, as well as the context of the passage as taught by the prior art or disclosed by the examiner.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Fadey S. Jabr whose telephone number is (571) 272-1516. The examiner can normally be reached on Mon. - Fri. 7:30am to 4:00pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, John Hayes can be reached on (571) 272-6708. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
